

Week 19 Activity Sheets

11. How do tubers and root vegetables differ? (p. 52)

Tubers...	Root Vegetables...
<i>(are a swollen underground stem)</i>	<i>(are an edible taproot)</i>

12. Which characteristic of a potato helps you know it is a tuber rather than a root vegetable? (p. 52)

(potatoes have eyes that can sprout and eventually bear leaves, which makes it a stem rather than a root)

13. Identify the following as either a... (pp. 51–53)

tuber

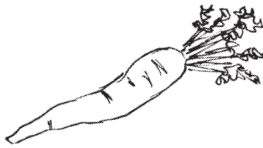

nut

fruit

legume

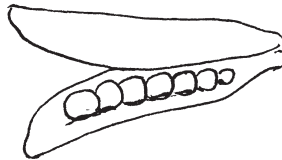

floret

root vegetable

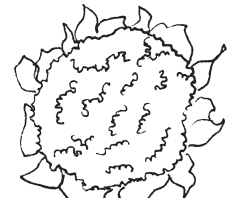

carrot

(root vegetable)

peas

(legume)

cauliflower

(floret)

potato

(tuber)

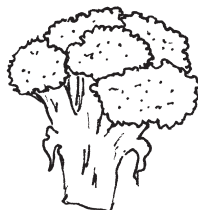

acorn

(nut)

peach

(fruit)

broccoli

(floret)

radishes

(root vegetable)

Challenge! peanut

(legume that is grouped with nuts)
